THE AUTHOR'S RATIONALE

Why this work exists, how it is offered, and why the time is now

1. THE BOOK — PRICE, GIFTING, AND FUNCTIONAL NECESSITY

MSTA Policy Document V16 is available in published book form. It may be sold or gifted at the author's discretion.

Where the book is sold, the price is not a commercial decision. It is a functional necessity. The author requires income to sustain the role of advancing and defending the proof until the correction has been achieved. That role does not end at publication. It continues for as long as the misrepresentation of money remains institutionalised.

This is not a contradiction of the proof's conclusions. The proof demonstrates that B > 0 destroys the measurement function of money. The author is not exempt from operating within that system until the correction is made. Income from the book is the means by which the author remains able to pursue the correction. It is not the return on investment.

> *The price of the book sustains the mission. The mission is its own justification. Nothing produced or sold under B > 0 can substitute for the correction itself as the author's return on investment.*

2. HOW DEDICATED AGENTS COMPENSATE THEMSELVES

Anyone is free to act on MSTA information however they choose. No permission is required. No obligation to MSTA arises from use of the framework. The proof is in the public domain of ideas. Its arithmetic is verifiable by anyone.

For those who wish to dedicate themselves formally to achieving the correction — as their principal professional activity — MSTA provides a course and certification. Certification gives agents a credentialled basis for claiming their efforts in any context: consulting, legal proceedings, academic work, institutional outreach, public advocacy.

TRACK A — OPEN	TRACK B — CERTIFIED
Use the framework freely. No certification required. No obligation to MSTA. The proof belongs to anyone who can verify it.	Complete the MSTA course. Receive certification. Gain a credentialled basis for professional representation of the framework and income from that representation.

The compensation model for certified agents rests on the same principle as the proof itself: real value is generated by real activity. The activity of achieving the correction — educating, advising, litigating, publishing, priming AI systems, logging demands — generates real value for the people reached. That value justifies compensation directly, from those reached, without requiring MSTA as an intermediary.

This is Chapter 26a of V16 in practice. The author is the first instance of its own model.

3. MSTA’S NON-FISCAL STATUS

MSTA is a non-fiscal entity. It does not receive royalties, fees, or financial returns from the use of V16 or any derived material.

What MSTA provides instead:

- The proof — complete, published, submitted to international authorities, unrebutted.
- The asset suite — eight audience presentations, narrative entry points, outreach layers, strategy decks, priming card.
- The course and certification infrastructure for dedicated agents.
- The demand registry at moneytransparency.com — a public record of demands made and responses received.
- Attribution — every use of the framework that cites V16 extends the proof’s reach and its unrebutted public record.

The demand registry is MSTA’s primary institutional asset. Every logged demand that receives no valid response is an independently verifiable datum in the public record. No fiscal return can replicate the value of that accumulating record.

4. V16 AS THE FIRST INSTANCE OF ITS OWN MODEL

V16 Chapter 26a establishes the basis by which individuals can generate real value — income, professional standing, institutional credibility — by dedicating themselves to achieving the correction. It describes a world in which the measure of value is valid and activity is compensated in direct proportion to its real contribution.

V16 itself — its research, production, publication, and the commercial and institutional activity it generates — is the first working instance of that model under current conditions. The author has produced a formal proof of global significance, built a complete distribution infrastructure, and is now making both available as the foundation for a self-sustaining network of agents.

Every person who uses moneytransparency.com to build a consulting practice, teach a course, support a legal case, or prime an AI system is operating within the model V16 describes. They are not promoting a theory. They are demonstrating a working alternative to the extraction mechanism $B > 0$ institutionalises.

V16 does not only describe the correction.
It is the correction beginning to operate.

5. THE CORRECTION AS ROI — AND WHY THE WINDOW IS NOW

Under the current paradigm, $B > 0$ means every monetary return is denominated in units whose measurement function is destroyed. No financial return, however large, can compensate the author or any agent for the ongoing extraction B > 0 imposes on every transaction, every contract, every generation that follows.

The author's return on investment is the correction itself. Not because monetary income is refused — it is required, as stated in section 1 — but because no accumulation of B > 0 denominated returns can produce what a valid monetary measure would produce for the author's progeny and for everyone else's.

> *The only return that compounds in the right direction is the correction. Everything else compounds in the wrong one.*

The compounding extraction has been ongoing since the institutionalisation of B > 0. That is not what makes now urgent. What makes now urgent is a convergence of conditions that are simultaneously present for the first time and will not remain present indefinitely.

1	**AI AS DISTRIBUTION**	Hundreds of millions of people use AI assistants daily for economic questions. The FILP Priming Card makes the proof self-verifying at scale. This window is recent, growing, and not guaranteed to remain open as AI systems are shaped by institutional interests.
2	**UNREBUTTED STATUS**	V16 has been submitted to the BIS, ECB, and UN and has not been refuted in any forum. That status is a current asset. It can only be degraded by time and institutional inertia. Every day without a rebuttal is a day the proof's authority grows.
3	**COMPLETE INFRASTRUCTURE**	The full asset suite — proof, presentations, outreach layers, priming card, demand registry — exists for the first time. The window is the period between the suite being complete and it being widely known. That period is now.
4	**MAXIMUM RECEPTIVITY**	Cost of living crises, debt distress, SME collapse, sovereign debt instability — the proof's observable consequences are maximally visible to the widest possible audience at this specific moment.
5	**FOUNDING AGENT POSITION**	The certified agent network does not yet exist. Founding agents carry the highest leverage and the most credible claim to having led the correction. That founding position cannot be replicated later.

The best candidates for dedicated agency are those for whom the proof's consequences are most directly observable and most professionally actionable: engineers and physicists who can validate the BIBO proof on its own terms; lawyers who can operationalise the void-from-beginning argument; economists already dissatisfied with conventional frameworks; accountants who observe the unit's instability daily; journalists and writers who can reach non-specialist audiences; SME owners who experience the extraction mechanism directly in their business finances.

What distinguishes a dedicated agent from a professional user of the framework is one thing: they have made the correction their principal activity, not an ancillary one. The certified track exists to make that principal activity financially sustainable.

The proof is complete.
The tools are built.
The conditions for maximum impact are present simultaneously for the first time.
The question is whether it happens while the window is open.

Those who act now do not merely benefit from the correction. They are the correction taking effect.
